This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Hypothesised that a hostile submissive interpersonal style distinguishes chronic depression from major depression.
- Major and chronic depression were associated with hostile and submissive interpersonal styles.
- Subgroup analyses suggest that the strength of the relationship increases with chronicity of depression.
