This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights:**

- Ten percent of women with HIV in Malawi had probable antenatal depression
- Up to six percent of women with HIV in Malawi had probable postpartum depression
- Published prevalence estimates may be influenced by missing data
- Nearly 40% endorsed a self-reported history of depression or anxiety
- The EPDS and PHQ-9 scores had high concordance
