

## Accepted Manuscript

The Relevance of Epigenetics to Seasonal Affective Disorder

Jacob Peedicayil

PII: S0165-0327(18)31088-7  
DOI: [10.1016/j.jad.2018.07.015](https://doi.org/10.1016/j.jad.2018.07.015)  
Reference: JAD 9925

To appear in: *Journal of Affective Disorders*

Received date: 18 May 2018  
Accepted date: 7 July 2018

Please cite this article as: Jacob Peedicayil , The Relevance of Epigenetics to Seasonal Affective Disorder, *Journal of Affective Disorders* (2018), doi: [10.1016/j.jad.2018.07.015](https://doi.org/10.1016/j.jad.2018.07.015)

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**HIGHLIGHTS:**

- Seasonal affective disorder is considered to be a specifier of major depressive disorder
- There is increasing evidence that abnormal epigenetic mechanisms of gene expression are involved in the pathogenesis of major depressive disorder
- This article suggests that abnormal epigenetic mechanisms of gene expression are involved in the pathogenesis of seasonal affective disorder
