This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We review and discuss the use of NIBS for post-stroke depression
- Both tDCS and TMS can be considered safe or associated with minor side effects
- There is controversial evidence of positive effects of tDCS and TMS in PSD treatment
- New data regarding the stimulation protocol and long-term efficacy are needed
