This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Psychoeducation may reduce caregiver burden at post-treatment, but not follow-up
- Psychoeducation improves caregiver knowledge at post-treatment and at follow-up
- Clear conclusions could not be drawn about the impact on psychological symptoms
- Services could consider offering psychoeducation to caregivers
- More methodologically rigorous research is needed
