This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlight**

- Basing on more spacious visual angle, the current study reorganized the macroscopical influence factors of attempted suicide into seven categories by professional knowledge, which including demographic characteristics, individual aspect, family environment aspect, economic aspect, social aspect, psychological strain aspect, psychological disorder aspect. This thought embodies the holistic and top-level design concept, provides a fire-new theoretical reference for searching the predictor of the attempted suicide.
- The current study handpicked 12 variables eventually from the preliminary screened 36 variable, which greatly simplify the predictor system of the attempted suicide. It is useful to screen the high-risk population rapidly and improve the prevent intervention efficiency of attempted suicide.
