This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This manuscript is a novel and important study of the relationship between maladaptive schemas and psychopathology, and carefully selected samples of major depressed patients and a comparison sample of patients with somatization disorder.
- The results contribute to both the understanding of major depression, and its relationship to another understudied diagnostic group.
