This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- The association of MST and sexual satisfaction/function is vastly understudied.
- Specific PTSD symptom clusters may mediate these associations.
- Anhedonia, dysphoric arousal, mood/cognition mediated MST and sexual satisfaction.
- Anhedonia and dysphoric arousal mediated MST and sexual function.
- Findings underscore the importance of assessing sexual health in MST survivors.
