This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

- Posttraumatic stress and disorders in parents after preterm and birth at term were examined.
- Postpartum posttraumatic stress (PTSS) was higher in parents of preterm infants.
- This risk for acute stress disorders was increased in mothers with preterm infants.
- The risk for postpartum stress disorders was not elevated in parents with preterm infants.
- Important risk factors for PTSS were stress during birth, social support and preterm birth.
