Title: The long-term effect of maternal dietary protein restriction on 5-HT_{1A} receptor function and behavioral responses to stress in adulthood

Authors: Wenrui Ye, Michael Duffy Pitlock, Martin A. Javors, Brent Thompson, James D. Lechleiter, Julie G. Hensler

PII: S0166-4328(18)30006-8
DOI: <https://doi.org/10.1016/j.bbr.2018.03.038>
Reference: BBR 11360

To appear in: *Behavioural Brain Research*

Received date: 2-1-2018
Revised date: 6-3-2018
Accepted date: 23-3-2018

Highlights

- Maternal low protein diet did not alter the birth weight of male or female pups.
- Maternal low protein reduced hippocampal 5-HT_{1A} receptor function in female offspring.
- Female offspring of dams fed a low protein diet showed increased sensitivity to stress.
