

## Accepted Manuscript

Title: The strength of reward-related learning depends on the degree of activation of ventral tegmental area dopamine neurons

Authors: E. Galaj, R. Ranaldi

PII: S0166-4328(18)30259-6  
DOI: <https://doi.org/10.1016/j.bbr.2018.04.012>  
Reference: BBR 11378

To appear in: *Behavioural Brain Research*

Received date: 16-2-2018  
Revised date: 22-3-2018  
Accepted date: 11-4-2018

Please cite this article as: Galaj E, Ranaldi R, The strength of reward-related learning depends on the degree of activation of ventral tegmental area dopamine neurons, *Behavioural Brain Research* (2018), <https://doi.org/10.1016/j.bbr.2018.04.012>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

The strength of reward-related learning depends on the degree of activation of ventral  
tegmental area dopamine neurons
