Title: Ultrastructural brain abnormalities and associated behavioral changes in mice after low-intensity blast exposure

Authors: Hailong Song, Landry M. Konan, Jiankun Cui, Catherine E. Johnson, Martin Langenderfer, DeAna Grant, Tina Ndam, Agnes Simonyi, Tommi White, Utkan Demirci, David R. Mott, Doug Schwer, Graham K. Hubler, Ibolja Cernak, Ralph G. DePalma, Zezong Gu

PII: S0166-4328(18)30071-8
DOI: <https://doi.org/10.1016/j.bbr.2018.03.007>
Reference: BBR 11329

To appear in: *Behavioural Brain Research*

Received date: 17-1-2018
Revised date: 19-2-2018
Accepted date: 5-3-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Ultrastructural brain abnormalities and associated behavioral changes in mice after low-intensity blast exposure

Highlights

- **Analyzed comprehensive physical data from an open-field primary blast model in mice**
- **Observed low intensity blast (LIB) induced nanoscale brain abnormalities in mice**
- **The ultrastructural damages occurred in the absence of necrosis and astrogliosis**
- **Reported associated neurobehavioral dysfunctions resulting from LIB exposure**
- **Provide insights into the pathogenesis of primary blast injury**
