Title: Molecular and Synaptic Mechanisms Regulating Drug-Associated Memories: Towards a Bidirectional Treatment Strategy

Authors: Matthew T. Rich, Mary M. Torregrossa

PII: S0361-9230(17)30375-1
DOI: <http://dx.doi.org/10.1016/j.brainresbull.2017.09.003>
Reference: BRB 9290

To appear in: *Brain Research Bulletin*

Received date: 30-6-2017
Revised date: 21-8-2017
Accepted date: 5-9-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Molecular and Synaptic Mechanisms Regulating Drug-Associated Memories: Towards a Bidirectional Treatment Strategy

Highlights

- **Re-exposure to drug-associated stimuli evoke memories that promote relapse**
- **Extinction and reconsolidation govern the strength of drug-related memories**
- **Extinction and reconsolidation are regulated by similar molecular mechanisms**
