This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Structural and functional characterization of age-associated changes at the blood-brain barrier. A comparative in vivo study in young adult and middle aged Wistar rats.

Running title: Aging and the blood-brain barrier
