Research report

Electrophysiological Reward Signals Predict Episodic Memory for Immediate and Delayed Positive Feedback Events

Gerrit Höljtje, Axel Mecklinger

PII: S0006-8993(18)30388-3

DOI: <https://doi.org/10.1016/j.brainres.2018.07.011>

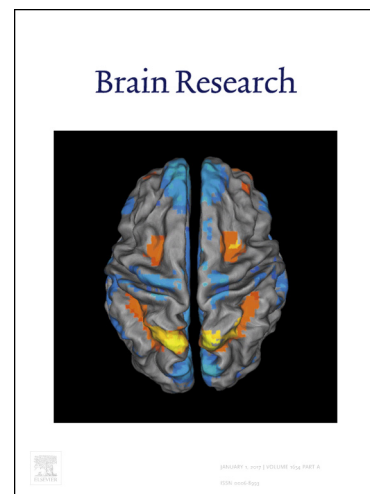

Reference: BRES 45878

To appear in: *Brain Research*

Received Date: 31 January 2018

Revised Date: 15 May 2018

Accepted Date: 9 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Electrophysiological Reward Signals Predict Episodic Memory for Immediate and Delayed
Positive Feedback Events

Gerrit Höljtje* and Axel Mecklinger
