Title: Simultaneous profiling of activity patterns in multiple neuronal subclasses

Authors: R. Ryley Parrish, John Grady, Neela K. Codadu, Andrew J. Trevelyan, Claudia Racca

PII: S0165-0270(18)30083-9
DOI: <https://doi.org/10.1016/j.jneumeth.2018.03.012>
Reference: NSM 7967

To appear in: *Journal of Neuroscience Methods*

Received date: 3-8-2017
Revised date: 20-2-2018
Accepted date: 23-3-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Simultaneous profiling of activity patterns in multiple neuronal subclasses

Highlights

- We report a technique to profile activity patterns of multiple neuronal subclasses.
- Ca²⁺ imaging, patch-clamp, immunohistochemistry, and MATLAB profile cell activity.
- Using the technique, we follow a population of parvalbumin cells during a seizure.
- This technique can be easily utilized in many areas of neuroscience research.
