Title: Deep learning reveals Alzheimer's disease onset in MCI subjects: results from an international challenge

Authors: Nicola Amoroso Domenico Diacono Annarita Fanizzi Marianna La Rocca Alfonso Monaco Angela Lombardi Cataldo Guaragnella Roberto Bellotti Sabina Tangaro, for the Alzheimer's Disease Neuroimaging Initiative

PII: S0165-0270(17)30429-6
DOI: <https://doi.org/doi:10.1016/j.jneumeth.2017.12.011>
Reference: NSM 7917

To appear in: *Journal of Neuroscience Methods*

Received date: 31-7-2017
Revised date: 18-12-2017
Accepted date: 20-12-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- A classification strategy based on Random Forest feature selection and Deep Neural Network is proposed.
- The work demonstrated the accuracy of deep learning strategies for early detection of Alzheimer's disease.
- This work ranked third for overall accuracy over all participating teams of the "International challenge for automated prediction of MCI from MRI data" hosted by the Kaggle platform.
