Title: Comparison among ultrasonic, electrical apparatus, and toxic chemicals for vestibular lesion in mice

Authors: Yusuke Yamaoka, Chikara Abe, Hironobu Morita

PII: S0165-0270(17)30409-0

DOI: <https://doi.org/10.1016/j.jneumeth.2017.11.021>

Reference: NSM 7906

To appear in: *Journal of Neuroscience Methods*

Received date: 21-8-2017

Revised date: 6-11-2017

Accepted date: 29-11-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Comparison among ultrasonic, electrical apparatus, and toxic chemicals for
vestibular lesion in mice**

Highlights

- Vestibular lesion induced using an ultrasonicator shows complete deletion of vestibular function without non-specific damage.
- Vestibular lesion can be induced chemically in C57BL/6J but not in ICR mice; however, the degree of disruption of hair cells was lower than that using an ultrasonicator or electrical apparatus.
