This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Simplified Adaptor for Stereotactic Surgery in Non-human Primates

Type of Article: Research Paper

Highlights

- A simple adaptor is proposed for stereotactic surgery in non-human primates.
- This adaptor can be attached to a conventional animal stereotactic frame.
- It allows identification of ear bar zero without imaging and computer processing.
- Simulation study shows the submillimeter precision in targeting.
- The proposed system will be useful for unexperienced translational researcher.
