Title: Expression patterns and role of PTEN in rat peripheral nerve development and injury

Authors: Hui Chen, Jianping Xiang, Junxia Wu, Bo He, Tao Lin, Qingtang Zhu, Xiaolin Liu, Canbin Zheng

PII: S0304-3940(18)30277-5
DOI: <https://doi.org/10.1016/j.neulet.2018.04.016>
Reference: NSL 33539

To appear in: *Neuroscience Letters*

Received date: 24-2-2018
Revised date: 29-3-2018
Accepted date: 7-4-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Expression patterns and role of PTEN in rat peripheral nerve development and injury

Highlights

- We investigated PTEN expression in peripheral nerve development and after injury.
- PTEN expression profiles will facilitate the understanding of peripheral nerve development and regeneration.
- Down-regulation of PTEN may be required to facilitate peripheral regeneration, such as during development.
