This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Lymphatic vasculature in human dural superior sagittal sinus:
implications for neurodegenerative proteinopathies**

Highlights:

- A recent novel discovery described lymphatic vessels in the dural sinuses in mice.
- We demonstrate the presence of such lymphatic vessels in human dura mater.
- Vessels may provide a drainage route for macromolecules from the brain parenchyma.
- We hypothesize their possible involvement in the pathogenesis of proteinopathies.
