Nematicidal activity of 'major royal jelly protein'-containing glycoproteins from Acacia honey

Bushra Bilal, M. Kamran Azim

PII: S0014-4894(18)30194-2

DOI: [10.1016/j.exppara.2018.07.011](https://doi.org/10.1016/j.exppara.2018.07.011)

Reference: YEXPR 7586

To appear in: *Experimental Parasitology*

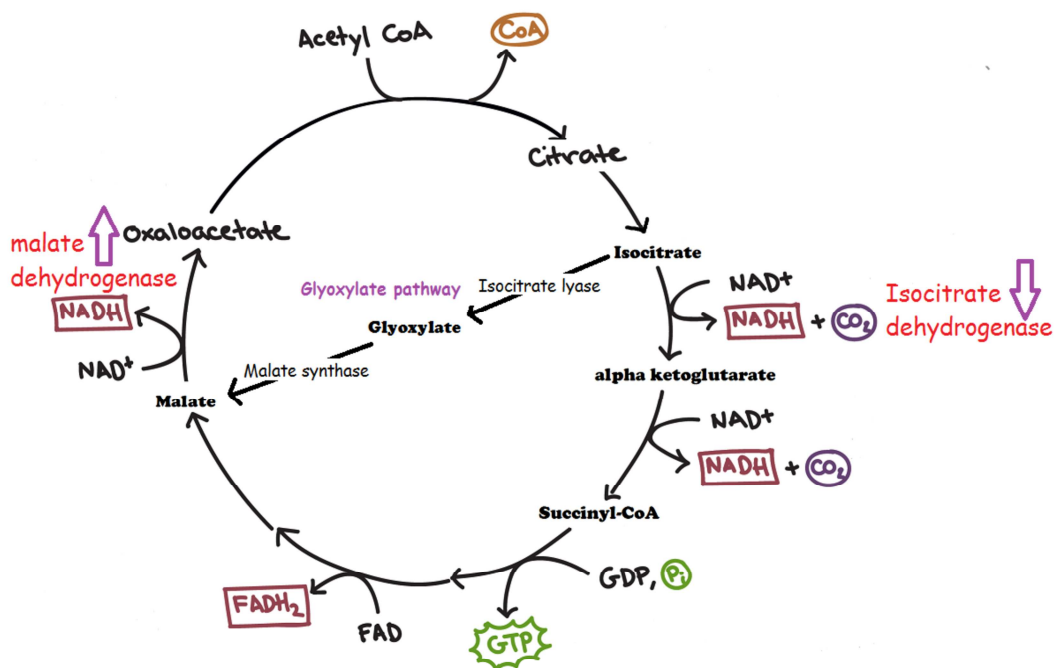

Received Date: 5 April 2018

Revised Date: 4 July 2018

Accepted Date: 20 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Citric acid cycle of L4 stage *C. elegans* affected by the exposure of *Acacia* honey and MRJP-containing glycoproteins isolated from honey. Arrows indicate down- and up-regulation of isocitrate dehydrogenase (encoded by *ishg-1*) and malate dehydrogenase (encoded by *mdh-1*) respectively.
