Title: Traits indicating a conservative resource strategy are weakly related to narrow range size in a group of neotropical trees

Authors: Eduardo Chacón-Madrigal, Wolfgang Wanek, Peter Hietz, Stefan Dullinger

PII: S1433-8319(17)30140-3
DOI: <https://doi.org/10.1016/j.ppees.2018.01.003>
Reference: PPEES 25398

To appear in:

Received date: 26-7-2017
Revised date: 21-1-2018
Accepted date: 24-1-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Traits indicating a conservative resource strategy are weakly related to narrow range size in a group of neotropical trees

Highlights

- Pronounced variation in geographical range sizes among closely related species is a frequent phenomenon.
- In plants, trait values linked to a conservative resource-use strategy have been hypothesised to be associated with small range sizes.
