Native crustacean species as a bioindicator of freshwater ecosystem pollution:
A multivariate and integrative study of multi-biomarker response in active river
monitoring

Lidwina Bertrand, Magdalena Victoria Monferrán, Catherine Mouneyrac, María
Valeria Amé

PII: S0045-6535(18)30844-0

DOI: [10.1016/j.chemosphere.2018.05.002](https://doi.org/10.1016/j.chemosphere.2018.05.002)

Reference: CHEM 21330

To appear in: *ECSN*

Received Date: 16 March 2018

Revised Date: 24 April 2018

Accepted Date: 1 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Multivariate and integrative study of multi-biomarker response in active river monitoring

Studied Area
Córdoba Province (Argentina)

Biomonitor
Palaemonetes argentinus

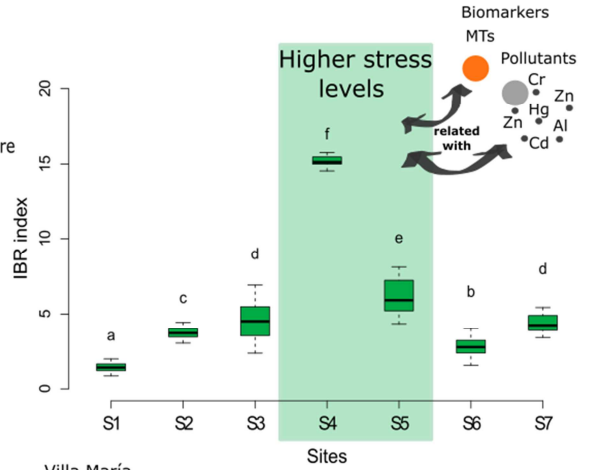

Active Biomonitoring

Exposure
96 h

Citalamochita River Basin as a case of study
