This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

> PCA and kriging interpolation introduced natural and anthropogenic sources. > Ni was the most potential for human health in Hexi Corridor farmland. > Using PMF to analyze sources of heavy metals in northwestern China. > Three anthropogenic sources were identified and quantified by PMF.
