This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Bovine blood cultures were exposed to epoxiconazole *in vitro*.
- Cytogenetic biomarkers were used to assess the geno/cytotoxic potential.
- The cell cycle arrest in the G1 and inhibition of replication in G1/S phases were recorded.
- Using DNA ladder assay apoptosis of cells was detected.
