This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Increased mortality (50 %) was observed after exposure to the substance mixture
- Developmental disruptures were observed
- Higher number of skin mucous cells and gill lamellas' deformations were observed
- Tramadol and naproxen mixture exposure revealed in oxidative stress
- The lowest observed effect concentration was estimated to be 10 µg/l
