Machine learning strategies for classification and prediction of alteration facies: Examples from the Rosemont Cu-Mo-Ag skarn deposit, SE Tucson Arizona

Juan C. Ordóñez-Calderón, Sergio Gelcich

PII: S0375-6742(18)30039-6
DOI: doi:[10.1016/j.gexplo.2018.07.020](https://doi.org/10.1016/j.gexplo.2018.07.020)
Reference: GEXPLO 6181

To appear in: *Journal of Geochemical Exploration*

Received date: 17 January 2018
Revised date: 25 July 2018
Accepted date: 29 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Machine learning strategies for classification and prediction of alteration facies: Examples from the Rosemont Cu-Mo-Ag skarn deposit, SE Tucson Arizona

Manuscript submitted to

Journal of Geochemical Exploration

Contents

Abstract

1. Introduction
 2. Geology, mineralization, and alteration
 3. Methods and terminology
 - 3.1. Whole rock geochemistry
 - 3.2. Quantitative mineralogy
 - 3.3. Data analytics
 - 3.3.1. Data imputation
 - 3.3.2. Compositional data analysis
 - 3.3.3. Unsupervised machine learning
 - 3.3.4. Supervised machine learning
 - 3.3.5. Repeated-measures design
 - 3.4. 3D-modeling
 4. Results and discussion
 - 4.1. Classification of skarn alteration facies
 - 4.1.1. Hierarchical clustering of mineralogical variables
 - 4.1.2. Compositional classification of skarn alteration facies
 - 4.2. Prediction of skarn alteration facies
 - 4.2.1. Effect of compositional representations on model performance
 - 4.2.2. Model complexity reduction
 - 4.2.3. Compensating class imbalances
 - 4.3. Geological interpretation of the predicted alteration facies
 5. Conclusions
- Acknowledgements
- References
