

Accepted Manuscript

Two analytical approaches quantifying the electron donating capacities of dissolved organic matter to monitor its oxidation during chlorination and ozonation

Linda Önnby, Nicolas Walpen, Elisabeth Salhi, Michael Sander, Urs von Gunten

PII: S0043-1354(18)30520-7

DOI: [10.1016/j.watres.2018.06.060](https://doi.org/10.1016/j.watres.2018.06.060)

Reference: WR 13887

To appear in: *Water Research*

Received Date: 21 March 2018

Revised Date: 6 June 2018

Accepted Date: 24 June 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Monitoring Chemical Oxidation of Dissolved Organic Matter (DOM)

untreated

chemically oxidized
