A metabolomic view of how low nitrogen strength favors anammox biomass yield and nitrogen removal capability

Yongzhao Guo, Yunpeng Zhao, Tingting Zhu, Jianqi Li, Ying Feng, Huazhang Zhao, Sitong Liu

PII: S0043-1354(18)30512-8

DOI: [10.1016/j.watres.2018.06.052](https://doi.org/10.1016/j.watres.2018.06.052)

Reference: WR 13879

To appear in: *Water Research*

Received Date: 5 April 2018

Revised Date: 7 June 2018

Accepted Date: 22 June 2018

Please cite this article as: Guo, Y., Zhao, Y., Zhu, T., Li, J., Feng, Y., Zhao, H., Liu, S., A metabolomic view of how low nitrogen strength favors anammox biomass yield and nitrogen removal capability, *Water Research* (2018), doi: 10.1016/j.watres.2018.06.052.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1 **A metabolomic view of how low nitrogen strength favors anammox**
2 **biomass yield and nitrogen removal capability**
