Quantitative characterization and analysis of granule transformations: Role of intermittent gas sparging in a super high-rate anaerobic system

To-Hung Tsui, George A. Ekama, Guang-Hao Chen

PII: S0043-1354(18)30282-3

DOI: [10.1016/j.watres.2018.04.002](https://doi.org/10.1016/j.watres.2018.04.002)

Reference: WR 13699

To appear in: *Water Research*

Received Date: 28 November 2017

Revised Date: 6 March 2018

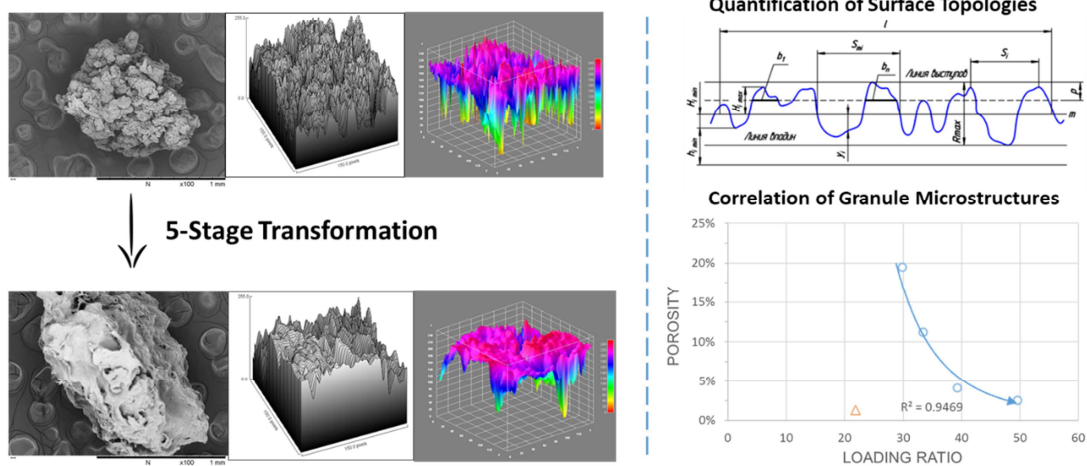

Accepted Date: 1 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Graphic Abstract

Quantitative Analysis of Granule Transformations in a High-rate Anaerobic System
