Pharmacokinetic/pharmacodynamic modeling of combination-chemotherapy for lung cancer

Louis T. Curtis , Victor H. van Berkel , Hermann B. Frieboes

PII: S0022-5193(18)30149-8
DOI: [10.1016/j.jtbi.2018.03.035](https://doi.org/10.1016/j.jtbi.2018.03.035)
Reference: YJTBI 9412

To appear in: *Journal of Theoretical Biology*

Received date: 9 December 2017
Revised date: 23 March 2018
Accepted date: 26 March 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Establishes a framework for evaluation of tumor response to combination chemotherapy
- Couples PK-PD multi-compartment models with a model of vascularized tumor growth
- Simulates tumor response to multiple drug regimens for non-small cell lung cancer
- Combination of MTD and metronomic drug regimens may not offer improved response
