Modelling the effects of bacterial cell state and spatial location on tuberculosis treatment: Insights from a hybrid multiscale cellular automaton model

Ruth Bowness, Mark A.J. Chaplain, Gibin G. Powathil, Stephen H. Gillespie

PII: S0022-5193(18)30120-6  
DOI: [10.1016/j.jtbi.2018.03.006](https://doi.org/10.1016/j.jtbi.2018.03.006)  
Reference: YJTBI 9383

To appear in: *Journal of Theoretical Biology*

Received date: 17 August 2016  
Revised date: 1 March 2018  
Accepted date: 6 March 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Individual-based model of tuberculosis disease progression and treatment
- How different tuberculosis bacterial phenotypes affect treatment outcome
- The effect of spatial distribution of tuberculosis bacilli on treatment outcome
