Biology* (2017), doi: [10.1016/j.jtbi.2017.10.007](https://doi.org/10.1016/j.jtbi.2017.10.007)

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Players in different roles cooperate together in the division of labor.
- We focus on linear division of labor to achieve goals.
- Monitoring violators is not effective in some social situations.
- The replicator equations for asymmetric games are used for analysis.
- Sanction systems without monitoring promote cooperation more than those with monitoring.
