Increased Efficiency in the Second-Hand Tire Trade Provides Opportunity for Dengue Control

Emilene Pliego Pliego, Jorge Velázquez-Castro, Markus P. Eichhorn, Andrés Fraguela Collar

PII: S0022-5193(17)30484-8
DOI: [10.1016/j.jtbi.2017.10.025](https://doi.org/10.1016/j.jtbi.2017.10.025)
Reference: YJTBI 9249

To appear in: *Journal of Theoretical Biology*

Received date: 13 January 2017
Revised date: 10 October 2017
Accepted date: 18 October 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A model to assess the importance of tire transportation in Dengue outbreaks is proposed.
- Persistent dengue states can be induced due to tire trade, regardless of whether favourable environmental conditions are met for an outbreak.
- The proposed model suggests that tire-trade regulation may be beneficial in reducing the Dengue spread.
- Particular regulation strategies for the trade in second-hand tires play an important role in the control of the disease.
