Interspecific variation, habitat complexity and ovipositional responses modulate the efficacy of cyclopoid copepods in disease vector control

Ross N. Cuthbert, Jaimie T.A. Dick, Amanda Callaghan

PII: S1049-9644(18)30084-7

DOI: <https://doi.org/10.1016/j.biocontrol.2018.02.012>

Reference: YBCON 3721

To appear in: *Biological Control*

Received Date: 10 January 2018

Revised Date: 12 February 2018

Accepted Date: 12 February 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Interspecific variation, habitat complexity and ovipositional responses
modulate the efficacy of cyclopoid copepods in disease vector control**
