Title: Insect cuticle: a critical determinant of insecticide resistance

Author: Vasileia Balabanidou Linda Grigoraki John Vontas

PII: S2214-5745(17)30119-0
DOI: <https://doi.org/doi:10.1016/j.cois.2018.03.001>
Reference: COIS 443

To appear in:

Received date: 20-12-2017
Revised date: 28-2-2018
Accepted date: 1-3-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Cuticular resistance is due to cuticle thickening and its altered composition
- Cuticular alterations can increase the intensity and broaden the spectrum of insecticide resistance
- The molecular mechanisms underlying cuticular resistance are poorly understood
