A two-phase flow model for submarine granular flows: With an application to collapse of deeply-submerged granular columns

Cheng-Hsien Lee, Zhenhua Huang

PII: S0309-1708(17)30652-8
DOI: [10.1016/j.advwatres.2017.12.012](https://doi.org/10.1016/j.advwatres.2017.12.012)
Reference: ADWR 3046

To appear in: *Advances in Water Resources*

Received date: 25 June 2017
Revised date: 5 October 2017
Accepted date: 11 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Collapse of granular column is simulated using a liquid-solid two-phase flow model
- A new model for particle response time is introduced to show initial-packing effect
- The role of dilatancy/contractancy in the collapse of granular column is revealed
