

## Accepted Manuscript

Title: Impacts of the combined exposure to seawater acidification and arsenic on the proteome of *Crassostrea angulata* and *Crassostrea gigas*

Authors: Anthony Moreira, Etelvina Figueira, Nélia C. Mestre, Denise Schrama, Amadeu Soares, Rosa Freitas, Maria João Bebianno

PII: S0166-445X(18)30381-3  
DOI: <https://doi.org/10.1016/j.aquatox.2018.07.021>  
Reference: AQTOX 4994

To appear in: *Aquatic Toxicology*

Received date: 25-4-2018

Revised date: 25-7-2018

Accepted date: 28-7-2018

## Highlights

- Different modes of action were observed in *C. angulata* and *C. gigas* exposed to different stressors
- Combined exposures induced lower response capacity than single exposures
- Species developed different modes of action in response to each stressor
