Side scan sonar: A cost-efficient alternative method for measuring seagrass cover in shallow environments

Austin Greene, Abdullah Faiz Rahman, Richard Kline, Md Saydur Rahman

PII: S0272-7714(17)31109-5

DOI: [10.1016/j.ecss.2018.04.017](https://doi.org/10.1016/j.ecss.2018.04.017)

Reference: YECSS 5821

To appear in: *Estuarine, Coastal and Shelf Science*

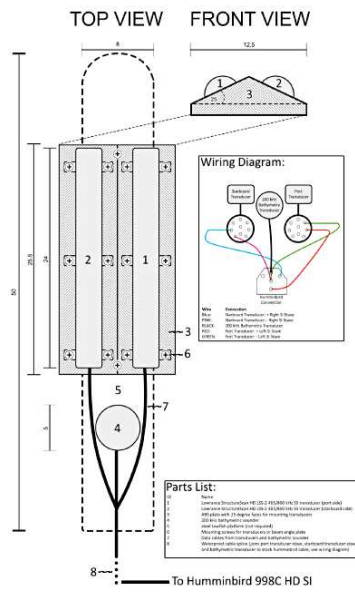

Received Date: 23 November 2017

Revised Date: 9 April 2018

Accepted Date: 12 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Cost-Efficient, High-Resolution Mapping of Shallow Seagrass Habitat
