This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Title:** Suspended sediment causes feeding current arrests *in situ* in the glass sponge  
*Aphrocallistes vastus*

**Authors:** Nathan Grant<sup>1</sup>, Eugueni Matveev<sup>1</sup>, Amanda S Kahn<sup>1</sup>, Sally P Leys<sup>1\*</sup>

<sup>1</sup>Department of Biological Sciences, University of Alberta

Edmonton, Alberta, Canada T6G 2E9

\*Author for correspondence, Email: sleys@ualberta.ca

**Keywords:**

Trawling, *Aphrocallistes vastus*, Glass sponges, Reefs, Filter feeding, Suspended sediments, Porifera

**Acknowledgments:**

We thank the captain and crew of the Canadian Coast Guard Ship JP Tully and the pilots of ROPOS for their careful work. D. Eerkes-Medrano helped substantially with instrument deployments and provided comments on a draft of this manuscript. We gratefully acknowledge K. Ladell, M. O, S. Creighton and A. Mar of Fisheries and Oceans Canada for initiating the request for this information, which arose out of a CSAS meeting in Nanaimo in 2012.

**Funding Sources:** ROPOS was funded via an NSERC Ship Time grant to S.P.L. Funding for the CCGS JP Tully came from Fisheries and Oceans Canada to M.O (2015) and for the CCGS Vector through an NSERC Ship Time grant to S.P.L. and R. Case (2014). Research costs and salaries of N.G., E.M. and A.S.K. were funded in part by NSERC Discovery and NSERC Strategic Network grant (CHONeII) grants, and DFO Canada ARCP grants to S.P.L., and by the University of Alberta.
