Reflection Source Term for the Wave Action Equation

Yuval Yevnin, Yaron Toledo

PII: S1463-5003(18)30154-9
DOI: [10.1016/j.ocemod.2018.05.001](https://doi.org/10.1016/j.ocemod.2018.05.001)
Reference: OCEMOD 1307

To appear in: *Ocean Modelling*

Received date: 14 November 2017
Revised date: 10 March 2018
Accepted date: 4 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A bottom reflection source term was derived for the wave action equation
- It approximates the mild-slope equation for small reflections and quasi-2D waves
- It is fitting for a simple and efficient implementation in wave forecasting models
- Numerical investigations show an excellent agreement to the mild-slope equation
