Title: Ploidy level of citrus rootstocks affects the carbon and nitrogen metabolism in the leaves of Chromium-stressed Kinnow mandarin plants

Authors: Muhammad Adnan Shahid, Rashad Mukhtar Balal, Naeem Khan, Lincoln Zotarelli, Guodong Liu, Muhammad Usman Ghazanfar, Bala Rathinasabapathi, Neil Scott Mattson, Juan Jose Martínez-Nicolas, Francisco Garcia-Sanchez

PII: S0098-8472(18)30266-1
DOI: <https://doi.org/10.1016/j.envexpbot.2018.02.010>
Reference: EEB 3391

To appear in: *Environmental and Experimental Botany*

Received date: 13-9-2017
Revised date: 16-2-2018
Accepted date: 16-2-2018

Please cite this article as: Shahid, Muhammad Adnan, Balal, Rashad Mukhtar, Khan, Naeem, Zotarelli, Lincoln, Liu, Guodong, Ghazanfar, Muhammad Usman, Rathinasabapathi, Bala, Mattson, Neil Scott, Martínez-Nicolas, Juan Jose, Garcia-Sanchez, Francisco, Ploidy level of citrus rootstocks affects the carbon and nitrogen metabolism in the leaves of Chromium-stressed Kinnow mandarin plants. *Environmental and Experimental Botany* <https://doi.org/10.1016/j.envexpbot.2018.02.010>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Ploidy level of citrus rootstocks affects the carbon and nitrogen metabolism in the leaves of Chromium-stressed Kinnow mandarin plants
