This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Effect of sodium chloride and glucose were studied on the biofilm formation and quorum sensing capability of *Vibrio parahaemolyticus*.
- AI-2 detection was performed by HPLC-FLD.
- FESEM and CLSM analysis were investigated for visual observation.
