This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Ion mobility spectrometry (IMS) is an attractive sensor for olive oil sector
- IMS provides information quickly and do not require sample preparation
- IMS is suitable to determine the origin of the olive oil, quality and adulteration.
- IMS is used for detection of extra virgin olive oil adulteration with other oils
