This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Table eggs are contaminated with *Salmonella* in commercial layers farms in the West Region of Cameroon.
- The *Salmonella* isolates identified are a threat to consumer's health and to poultry industry.
- The One health approach should be used to ensure the production of safe, *Salmonella*-free eggs for consumers.
