A hybrid framework for quantifying the influence of data in hydrological model calibration

David P. Wright, Mark Thyer, Seth Westra, David McInerney

PII: S0022-1694(18)30036-2  
DOI: <https://doi.org/10.1016/j.jhydrol.2018.01.036>  
Reference: HYDROL 22518

To appear in: *Journal of Hydrology*

Received Date: 6 March 2017  
Revised Date: 30 November 2017  
Accepted Date: 15 January 2018

Please cite this article as: Wright, D.P., Thyer, M., Westra, S., McInerney, D., A hybrid framework for quantifying the influence of data in hydrological model calibration, *Journal of Hydrology* (2018), doi: <https://doi.org/10.1016/j.jhydrol.2018.01.036>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

# A hybrid framework for quantifying the influence of data in hydrological model calibration

Authors: David P. Wright, Mark Thyer, Seth Westra, David McInerney

*School of Civil, Environmental and Mining Engineering, University of Adelaide, Adelaide, 5005,*

*Australia*

Corresponding Author: David P. Wright, [david.p.wright@adelaide.edu.au](mailto:david.p.wright@adelaide.edu.au)

**Keywords:** *hydrologic model calibration, influence diagnostics, influence analysis, leverage, generalized leverage, Cook's distance.*
