An ensemble-based dynamic Bayesian averaging approach for discharge simulations using multiple global precipitation products and hydrological models

Wei Qi, Junguo Liu, Hong Yang, Chris Sweetapple

PII: S0022-1694(18)30025-8
DOI: <https://doi.org/10.1016/j.jhydrol.2018.01.026>
Reference: HYDROL 22508

To appear in: *Journal of Hydrology*

Received Date: 27 May 2017
Revised Date: 1 December 2017
Accepted Date: 9 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

An ensemble-based dynamic Bayesian averaging approach for discharge simulations using multiple global precipitation products and hydrological models

Highlights:

An ensemble-based dynamic Bayesian averaging approach is proposed

Estimate joint probability of precipitation and hydrological models being correct

Estimate posterior distribution based on magnitude and timing of flows

Outstanding capability to estimate expected discharges
