A non-stationary cost-benefit analysis approach for extreme flood estimation to explore the nexus of 'Risk, Cost and Non-stationarity'

Wei Qi

PII: S0022-1694(17)30603-0

DOI: <http://dx.doi.org/10.1016/j.jhydrol.2017.09.009>

Reference: HYDROL 22229

To appear in: *Journal of Hydrology*

Received Date: 13 May 2017

Revised Date: 3 September 2017

Accepted Date: 5 September 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**A non-stationary cost-benefit analysis approach for extreme flood estimation to explore the nexus of ‘Risk, Cost and Non-stationarity’**
