Reservoir Operations Under Climate Change: Storage Capacity Options to Mitigate Risk

Nima Ehsani, Charles J. Vörösmarty, Balázs M. Fekete, Eugene Z. Stakhiv

PII: S0022-1694(17)30599-1

DOI: <http://dx.doi.org/10.1016/j.jhydrol.2017.09.008>

Reference: HYDROL 22228

To appear in: *Journal of Hydrology*

Received Date: 27 June 2017

Revised Date: 24 August 2017

Accepted Date: 4 September 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Reservoir Operations Under Climate Change: Storage Capacity Options to Mitigate Risk

Keywords:

Dams, regional trends, Northeast United States, flow regulation, water security, water availability

Highlights:

- The necessity and importance of dams in providing water security will increase
- Effects of dams on downstream flows will be amplified
- Effectiveness of existing dams in creating drought/flood resiliency will be limited
- Increasing the size and number of dams may be necessary in the future
